

Supporters and Builders Guide

A cleaner route for people sharing, validating, or building around the site after the proof layer is already clear.

Read order

- Use the dashboard and proof packets first.
- Use the Family Platform page for the four-lane architecture.
- Use standards and reform tracker for discipline and follow-through.
- Only after that, use about, open letter, or share materials.

Carry first

- Supporter share pack.
- Family Platform fast-read guide.
- Standards fast-read guide.
- About Justin fast read.

Operating rule

- The share layer should stay attached to the proof layer.
- The site is stronger when supporters can point back to the record instead of floating above it.
